

Primary Care Networks

Attachment Reporting and Attachment Records

General Guidelines

All family physicians (FPs) and nurse practitioners (NPs) participating in a primary care network (PCN) are required to submit **attachment records**.

- Contracted FPs who are **new to practice** and working in a PCN submit an attachment record (using the PCN Attachment code – see table below) for each patient who becomes part of their panel.
- **PCN NPs** (whether contracted or employed) and NPs practicing in Patient Medical Homes (PMHs), Urgent and Primary Care Centres (UPCCs), Community Health Centres (CHCs), NP Primary Care Clinics (NPPCCs), and First Nations Primary Care Clinics (FNPPCCs) submit the PCN Attachment code (see table below) for all net-new patient attachments, and submit the PCN Existing Panel Or Panel Transfer Report code (97701) for all non-net-new patient attachments. The difference is as follows:
 - Non-net-new attached patients are those who were already attached to the NP before the NP joined the PCN/clinic, and who have chosen to stay attached to the NP when he/she joined the PCN/clinic; or were transferred to the NP from another most responsible provider (e.g., a retiring physician) in the same PCN.
 - Net-new attached patients are any individuals who do not fit into either of the above situations.
- FPs on the **Group Contract for Practicing Full Service Family Physicians** submit attachment records to identify new patients attached to their practice (using the PCN Attachment Code – see table below), as well as those patients who were members of their existing practice (using the generic attachment code – 97700).
- FPs on fee-for-service (**FFS**) or **other compensation models** submit attachment records to identify only new patients who are attached to their practice and are not required to retroactively submit attachment records for those patients who joined their panels prior to their participation in the PCN.

The attachment record is a \$0 administrative fee code submitted to the Medical Services Plan (MSP) / Health Insurance BC (HIBC) through Teleplan on an annual basis¹ where attachment between a provider and patient is established after the completion of an **attachment conversation**.

An attachment record is submitted only once per patient, per year¹ and should not be submitted when attachment is not established. FPs on the **Group Contract for Practicing Full Service Family Physicians** may submit an attachment code prior to an attachment conversation with an existing patient; however, the attachment conversation must occur during the patient's first visit with the clinic.

¹ NPs need to submit the code only once, and do not need to resubmit it each year.

The attachment conversation should include the following commitments:

The FP or NP and their practice team commits to:

- Provide the patient with safe and appropriate care
- Communicate with the patient honestly and openly to best address the patient's health-care needs
- Coordinate any specialty care the patient may need
- Offer timely access to care, to the best of the team's ability and as reasonably possible in the circumstances
- Maintain an ongoing record of the patient's health
- Keep the patient updated on any changes to services offered at the clinic

The patient is asked to commit to:

- Seek their health care from the practitioner and/or their team whenever possible
- Name the practitioner as their primary care provider if they visit an emergency facility or another provider
- Communicate with the practitioner honestly and openly to help best address their health-care needs

The attachment record submitted through Teleplan will include the following information:

- a) MSP payee number (note: this should be the clinic payee number, if one exists)
- b) Practitioner number
- c) Patient's / client's personal health number (PHN)
- d) Patient's / client's name
- e) Date
- f) Attachment code for the PCN (*or, for NPs who are reporting a non-net-new attachment, code 97701 PCN Existing Panel Or Panel Transfer Report*)
- g) International Classification of Diseases (ICD)-9 diagnostic codes (1 code mandatory, 3 maximum)
- h) Location code (L – Longitudinal Primary Care Practice)

With respect to item g) above, ICD-9 is a mandatory field within all MSP claims and encounter record submissions. Since the attachment record is administrative, the practitioner must also submit a separate encounter record or FFS claim for the visit (such as a visit, examination or procedure). Practitioners may use the same ICD-9 code for the attachment record and the accompanying encounter record / claim or use a code for general symptoms (780).

Data collected through the submission of attachment records will be used for tracking and measuring attachment against the PCN's objectives. For FPs on the Group Contract for Practicing Full Service Family Physicians, the attachment records will inform the calculation of the contract's panel and complexity premium payment. Measurement will be supported by the Ministry of Health's Health Services Information, Analysis and Reporting Division as well as GPSC's Community Practice and Quality Team and Practice Support Program.

Last updated: March 7, 2023

Technical aspects:

- a. Attachment codes will be created for each PCN community.
- b. New attachment codes are provided as PCNs are established. The Ministry of Health will create the codes and communicate the codes to the health authorities. As new attachment codes are created, they will be added to this document.

Questions regarding the submission of attachment records should be directed to PCN.Compensation@gov.bc.ca. NP-specific queries can also be directed to the Regional Leadership Team of the Nurses and Nurse Practitioners of BC at nppracticesupport@nnpbc.com, or the Ministry of Health's Nursing Policy Secretariat at NursingPolicySecretariat@gov.bc.ca.

PCN Attachment Codes
